

ACKNOWLEDGEMENTS

The satisfaction that accompanies the successful completion of this project would be incomplete without mentioning the people who made it possible, without whose constant guidance and encouragement would have made efforts go in vain. I consider myself privileged to express gratitude and respect towards all those who has guided through the completion of projects.

I convey thanks to my project guide **Mr. Fenil Khatiwala**, Computer Engineering and Information Technology department, CGPIT for providing encouragement, constant support and guidance which was of a great help to complete this project work successfully.

I am grateful to my external guide **Mr. Amol Pomane**, Manger of Digital Marketing in IBN technologies Ltd., Pune for giving me the support and encouragement that was necessary for the completion of this project.

I am grateful to **Ms. Purvi Tandel**, Head of the Department, Computer Engineering and Information Technology, CGPIT for giving us the support and encouragement that was necessary for the completion of this project.

I would also like to express my gratitude to **Dr. N. C. Shah**, Director, Chhotubhai Gopalbhai Patel Institute of Technology for providing us congenial environment to work in.

I would like to thank all the faculty members for their patience, understanding and guidance that gave me strength and will power to work through the long tedious hours for developing a project and preparing the report.

Last but not the least, I would also like to thank my colleagues, who have co-operated during the preparation of my report and without them, this project has not been possible. Their ideas helped me a lot to improve my project report.

Todiwala Aarzin M. (201303100910043)

ABSTRACT

“Email Automation for Greeting Employees” is a web application which will simplify the work of HR team. HR team has to send greetings to the employee, so by using this web application, we can greet employee for their welcome on the first day, on their birthday and on their work anniversary. The whole website is dynamic, which will fetch data from the user and will display on a template, that template will be emailed on the companies official grouped mail Id.

CHAPTER 1 INTRODUCTION

1.1 Overview

Email Automation for Greeting Employees is a web application which will simplify the work of HR team. HR team has to send greetings to the employee, so by using this web application, we can greet employee for their welcome on the first day, on their birthday and on their work anniversary.

1.2 Problem Definition

1.2.1 Welcoming new employee:

Whenever the new employee enter's the company, HR has to give an introduction of that person through email to the existing employees, so by generating this website, it will be really easy for HR to just fill up the details and the email will be sent to all employees.

1.2.2 Birthday Greetings:

Whenever there's employee's birthday HR need to get a graphic done through a graphics designer then attach it to the email. But after this website HR won't need graphic designer to design a graphics for a birthday greetings, as this website will make a graphic and that graphic will be sent to all employees through email.

1.2.3 Work Anniversary:

Whenever there's employee's work anniversary HR need to get a graphic done through a graphics designer then attach it to the email. But after this website HR won't need graphic designer to design a graphics for work anniversary greeting as this website will make a graphic and that graphic will be sent to all employees through email.

1.3 Scope of Project

To simplify the work of HR through making a website which will make template with sufficient data for welcoming new employee, for birthday and for work anniversary.

CHAPTER 2 TRAINING ACTIVITIES

During my internship, I acquired new knowledge on WordPress which is one of the largest CMS written in PHP with different types of plugins. I mainly worked on plugins like visual composer and thrive page builder were the main components I worked for. I was working for Landing Pages, Sales Pages and Blogs. Even revamping of existing pages was done by me.

Landing Pages (25 pages):

"After months of researching 100's of companies, visiting their offices, and extensive reference checks, we are extremely happy with our decision to select IBN. They have exceeded our expectations with consistent levels of specialized knowledge, quality, speed, and professionalism"

Blogs (29 blogs till today's date):

5 Tips to Get Your Business to Be Financially Fit This Tax Season

April 21, 2017 By IBN Blog [\[Edit\]](#)

With the spring weather just around the corner [well here's to hoping...] it's a good time to not only wipe away the cobwebs from around the house but to also have a

look into your business and see how financially fit it is. For some this means going back to see if you're on track, compared to new financial year goals and plans that you would have set prior to 30 June.

f 0

We often set resolutions that quickly fade with the stresses of business life. Here are a few tips to help you move forward, make those goals a reality and end the 2016-17 financial year on a good note!

67

in 0

G+ 0

1. Let's Talk

Make the time to talk about money. Don't wait for over spending, overdrafts or a financial crisis. Get clear on your needs and wants. Many [small business](#) owners think they can manage their [taxes](#) on their own, while you may think you are saving money you can actually hinder your business if finance is not your thing. Talk to your accountant about the information you must keep and the things you need to know.

2. Manage Your Information

Get organised! The quality of your information will determine the success of your business. Look into a good cloud accounting system such as Xero and automate as much as you can. You will be able to capture, store and keep track of invoices and receipts, together with the convenience of accessing anything, anywhere at any time including [financial](#) reports you need to manage, in order to determine the health of your business.

f 0

67

in 0

G+ 0

3. Create a Budget

Establish your income streams, determine fixed costs and include expenses. You may find the earnings left over after paying basic business expenses are being foolishly spent. Is your income increasing, stagnate or decreasing? The benefit of having a good accounting system like **Xero** is that you can include a budget and compare to actual monthly and end of year reports. Make sure to set aside time each month to evaluate your progress, adjust and make improvements if required.

4. Pay off Debt

Prioritise the process you pay off your debts. For loans, credit cards and other types of debt, arrange the debts according to the interest rate you are paying on those debts. debt, arrange the debts according to the interest rate you are paying on those debts. Plan on making additional payments even a little over the minimum monthly payment, this can make a huge difference in the long term. Then start paying down the loans and debts with the highest interest rate first.

f 0

67

in 0

G+ 0

5. Set Your Business Financial Goals

As Benjamin Franklin said "If you fail to plan, you are planning to fail". Whether your financial goals are small or big it is worth setting them so that they are concrete and you have something to work towards. Some are afraid to set BIG financial goals for fear of failure or because you don't think you're capable of achieving them. Start by breaking down those bigger goals into segments so that they appear more achievable and don't become so intimidating. Build a time frame around your financial goals and know what you need to do. Understand the mechanics behind your financial goals i.e. hours, number of projects etc. then move backward to determine timing.

Main Pages(ibnaccounting.com-28pages):

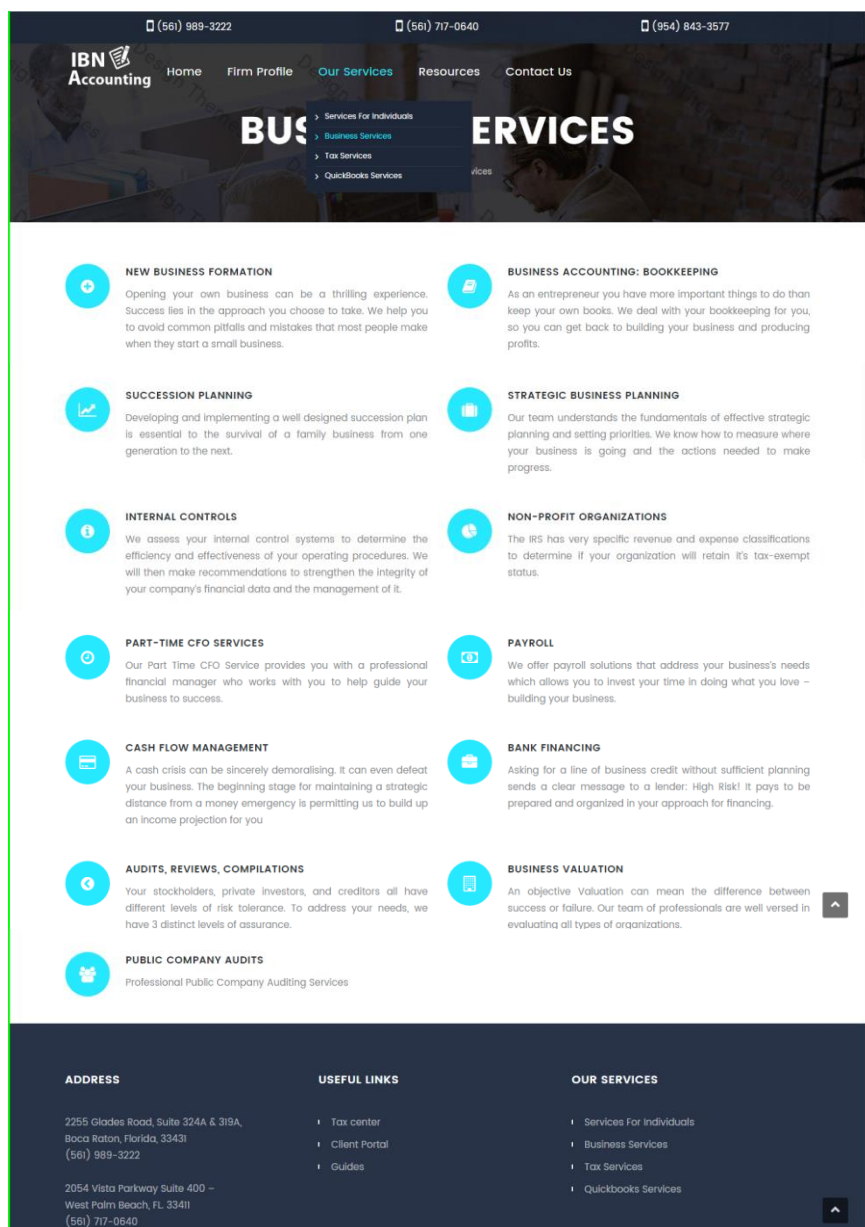

Figure 2-3 Page of IBN Accounting

Photoshop which is a photo editing software used by designers to design the images. These banners are designed for Blogs & Landing Pages and it also includes small icons for other landing pages:

Figure 2-4 Landing Page Banner

Figure 2-5 Blog Banner

Figure 2-6 Icons

I also learnt HTML5 and CSS3, which are the advanced versions of HTML and CSS.

Overall, it was a good experience working there and share a sense of responsibility. I also learnt with how to work in corporate world, how to work according to a client's requirements.

The whole internship of five months was quite beneficial in terms of acquiring knowledge.

CHAPTER 3 SYSTEM PLANNING

3.1 Project Development Approach

Each project needs to be developed with software model which makes the project with high quality, reliable and cost effective.

Software model used in my project is Waterfall Model:

Waterfall approach was first SDLC Model to be used widely in Software Engineering to ensure success of the project. In "The Waterfall" approach, the whole process of software development is divided into separate phases. In this Waterfall model, typically, the outcome of one phase acts as the input for the next phase sequentially.

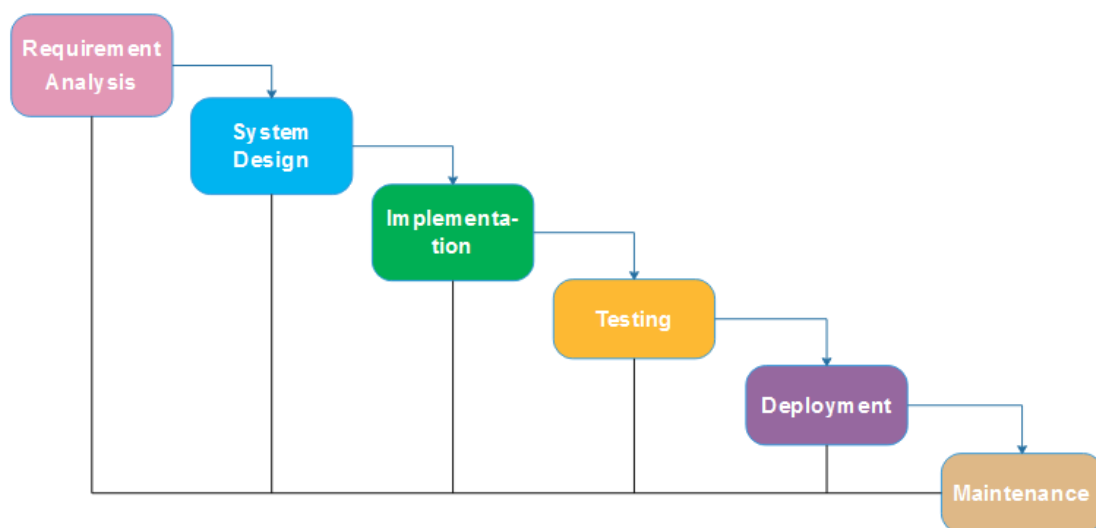

Figure 3-1 Waterfall model

The sequential phases in Waterfall model are –

Requirement Gathering and analysis – All possible requirements of the system to be developed are captured in this phase and documented in a requirement specification document.

System Design – The requirement specifications from first phase are studied in this phase and the system design is prepared. This system design helps in specifying

hardware and system requirements and helps in defining the overall system architecture.

Implementation – With inputs from the system design, the system is first developed in small programs called units, which are integrated in the next phase. Each unit is developed and tested for its functionality, which is referred to as Unit Testing.

Integration and Testing – All the units developed in the implementation phase are integrated into a system after testing of each unit.

Deployment of system – Once the functional and non-functional testing is done; the product is deployed in the customer environment or released into the market.

Maintenance – There are some issues which come up in the client environment. To fix those issues, patches are released. Also to enhance the product some better versions are released. Maintenance is done to deliver these changes in the customer environment.

Advantages of your software model:

To simplify the work of HR through making a website which will make a template with sufficient data for welcoming a new employee, for birthday and for work anniversary.

3.2 System Modules

Here are different modules, on which I had worked on.

3.2.1 HR Module

In HR module, HR will first login, then they can select any option like birthday, work anniversary or welcoming employee and at last when the template is done they will send that template through email to every employee by clicking on send button which is present below the template.

3.2.2 Department Module

Where all the data of the department will be stored.

3.3 Functional Requirements

Table 2.1 : Functional Requirements

ID	Title & Description
FR1	Title: HRLogin Desc: HR can login through the login page by entering username and password.
FR2	Title: Option module Desc: Here, three options would be given i.e., Welcoming Employee, Birthday and Work Anniversary.
FR3	Title: Form page for welcoming new employee Desc: In this module we can enter the information of new employee.
FR4	Title: Edit Profile page Desc: Select the item to be removed and the item will be removed.
FR5	Title: Birthday form Desc: In this module we can create a birthday template
FR6	Title: Work anniversary form Desc: In this module we can create a work anniversary template
FR7	Title: Send an Email Desc: In this module email will be sent through website.
FR8	Title: Logout Desc: In this module, it will either get logout or go to option page.

3.4 Non Functional Requirements

- **Usability:** Its easy to use, and its easy to learn.
- **Correctness:** Things are properly done.
- **Appearance:** It looks pleasant and even attractive, it often promotes confidence in its use.
- **Usefulness:** Needs are relevant.
- **Delightfulness:** It goes beyond expectations in ways that create delight.
- **Capacity:** The capacity can be extended.

3.5 Timeline Chart

Figure 3-2 Timeline chart

CHAPTER 4 SYSTEM DESIGN

4.1 Use Case Diagram

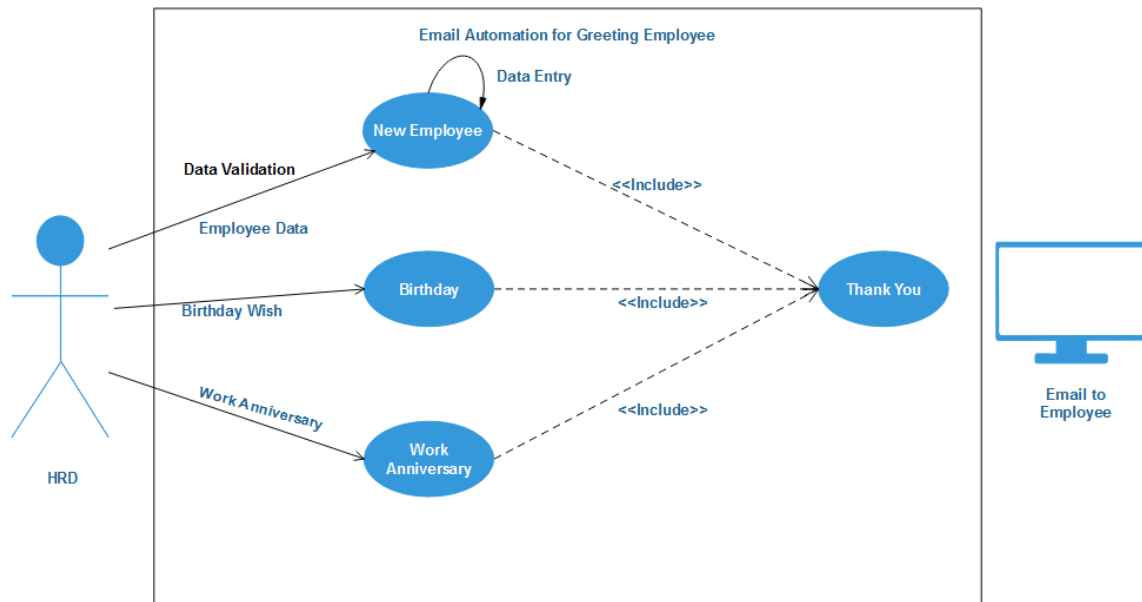

Figure 4-1 Use-case diagram

Desc: In this figure, we explain that HRD will validate the data and an email will be sent to employees.

4.2 Sequence Diagram

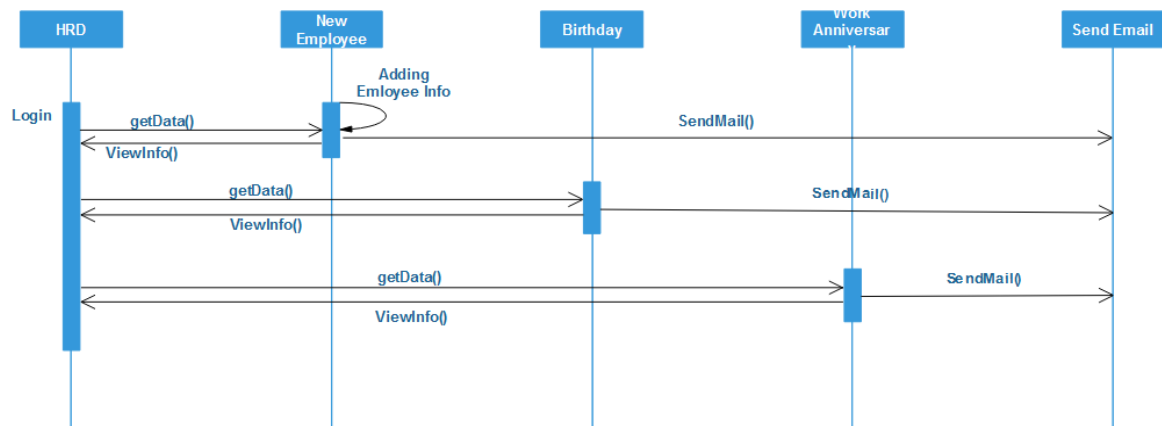

Figure 4-2 Sequence diagram

Desc: A sequence diagram is an interaction diagram that shows how objects operate with one another and in what order. The sequence from login to the end by sending mail is shown in this figure.

4.3 Activity Diagram

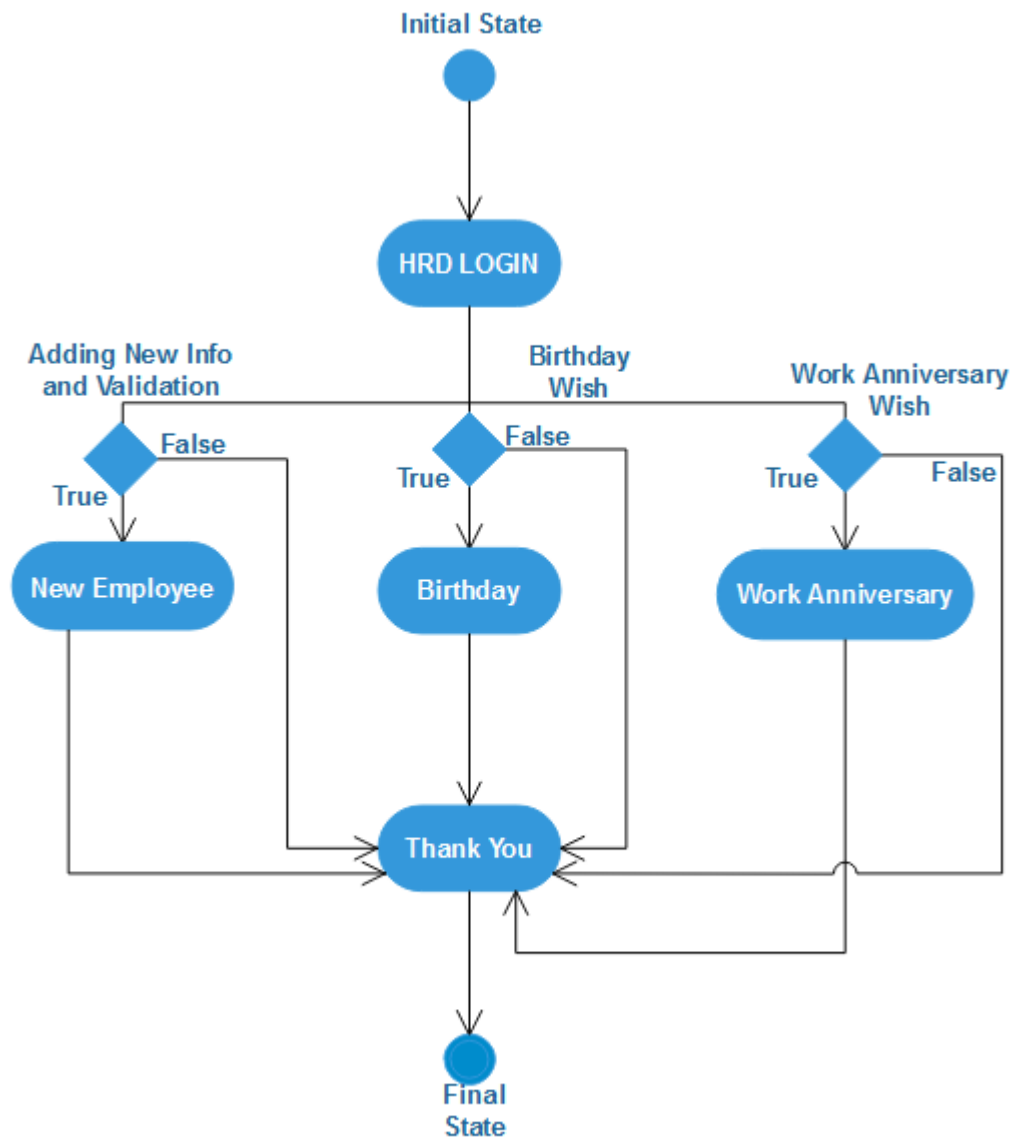

Figure 4-3 Activity diagram

Desc: Activity diagram is another important diagram in UML to describe dynamic aspects of the system. Starting from initial state to final state is shown in the figure.

4.4 Class Diagram

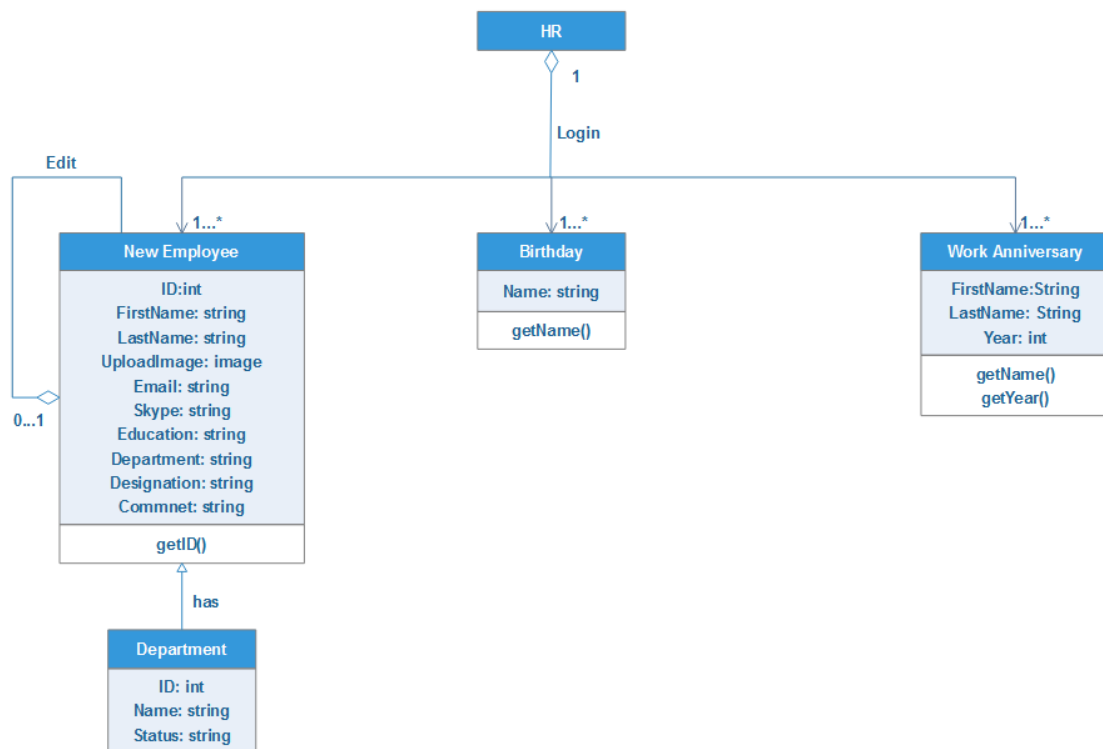

Figure 4-4 Class Diagram

Desc: A class diagram in the Unified Modeling Language (UML) is a type of static structure diagram that describes the structure of a system by showing the system's classes, their attributes, operations (or methods), and the relationships among objects. In this figure the flow of class diagram is shown.

4.5 Database Schema

Table 4-1 New_Employee Table

Column Name	Data Type	Size	Constraint	Description
Id	INT	6	Primary Key	ID No.
firstname	VARCHAR	30	---	First name
lastname	VARCHAR	30	---	Last Name

CHAPTER 6 CONCLUSION AND FUTURE SCOPE

This project has concluded that the work of HR is been minimized and will optimized graphics designer's work. In Project scope, I have learnt specific prject goals deliverable, task, cost within deadline. Futuristicly, we can add more random templates for birthday and work anniversary. Even we can add more data into database for more use.
